

Review of: "An Investigation of The Phytochemical Richness of Fresh Musa Paradisiaca L. (Plantain) Stem Juice and Its Anticonvulsant Potential on Pentylenetetrazole (Ptz)-Challenged Rats"

Masuma Akter

Potential competing interests: No potential competing interests to declare.

Once the authors make a few corrections, the manuscript can be accepted.

1. Although your work on rats is thorough, you have written about albino mice in the results section and experimental design. What justification existed for the combination of male albino rats and adult albino mice of unknown sex in this study?
2. Further information is needed for the phytochemical analysis of MP juice.
3. The sample size is very tiny, and further details about the sampling plan should be included in the methods section.
4. There should be a description of the acute toxicity and lethality (LD50) research methodology.
5. Further research is necessary because the data in this study is very preliminary.
