Thanks for offering the review request.

I congratulate the authors for working on this important but mostly overlooked subject.

Comments-

The title could be more specific to the context of the study. Better to replace words like tetrapods and extrapositive in the title.

The present form of the title indicates that the study is on all tetrapod cold-blooded animals.

Better explain the specific ethical and normative elements of this study.

Please enlighten us on the reason for selecting specific classes of school children instead of a randomized sampling among all students in secondary school.

The sampling technique, statistics, and ethical/participant consent statement should have been improved.

Please fix a few syntax, spelling, and punctuation errors.

Best wishes,
