Potential competing interests: No potential competing interests to declare.

Important issues have been highlighted in the paper and recommended for publication with minor changes. some crucial points I want mention are:

1. Most important and major changes are required in sources mentioned and their formatting. For some facts sources/supporting proof are not mentioned like in 'Background section "it has lost preference in recent years'.
2. Abbreviations should be mentioned in first existence not to be repeated. Keep same format in the entire document.
3. Minor Grammatical mistakes are there.
4. In way forward SDGs are mentioned but I found SDG aspect is not discussed much in the analysis part. More relevance pertaining to SDGs need to be studied and conclusions to be made.

Best wishes.
