F5 Leiden Allele

National Cancer Institute

Source

National Cancer Institute. *F5 Leiden Allele*. NCI Thesaurus. Code C91334.

Human F5 Leiden allele is a variant form of the F5 gene that is located in the vicinity of 1q23 and is approximately 75 kb in length. This allele, which encodes coagulation factor V Leiden protein, is involved in hypercoagulability due to resistance to degradation by activated protein C.
