Regarding the article titled;

Antimicrobial Sensitivity of Plant Extracts of Acacia arabica, Prosopis juliflora, Abutilon indicum, and Bryonia laciniosa on Staphylococcus aureus, Pseudomonas aeruginosa, and Escherichia coli

Today, one of the ways to overcome antibiotic resistance is to use medicinal plants.

This article is very well-designed. The selected strains are very suitable.

It will be more valuable if the performance of these medicinal plants is tested on antibiotic-resistant microbial and bacterial clinical isolates.

Also, investigating the performance and side effects of these plants in-vivo experiments should be determined.
