

# Review of: "Flood Prediction Using Artificial Neural Networks: A Case Study in Temerloh, Pahang"

Clarimar Coelho

**Potential competing interests:** No potential competing interests to declare.

After thoroughly examining the latest iteration of the article, I find myself unable to offer any suggestions for improvement. The content is well-researched, logically structured, and effectively communicates its intended message. The clarity of language and coherence of argumentation contribute to its overall strength.

Furthermore, the article demonstrates a commendable attention to detail, with thorough citations and a nuanced exploration of the topic at hand. The author's expertise on the subject matter shines through, enhancing the credibility and authority of the piece.

In light of these observations, I wholeheartedly endorse moving forward with the publication process. This article has the potential to make a valuable contribution to its respective field, and I am confident that it will be well-received by its intended audience.

Therefore, I encourage the author to proceed with confidence, knowing that their hard work and dedication have resulted in a polished and impactful piece of writing.
