The research paper titled "Exploring the Factors of Using Cloud Service in Malaysia Higher Education Institutions During the COVID-19 Pandemic Outbreak" presents a timely investigation into the adoption of cloud services within Malaysian higher education amidst the COVID-19 crisis. The study meticulously examines the factors influencing this adoption, offering valuable insights for both academia and industry. By analyzing the challenges and opportunities associated with cloud service utilization, the paper contributes significantly to our understanding of technology integration in educational settings during times of crisis.

However, the paper would benefit from a more extensive discussion of the specific methodologies employed to gather data and analyze the findings. Additionally, further empirical validation, perhaps through case studies or surveys, could strengthen the paper's argumentation and generalizability. Despite these minor limitations, the paper effectively addresses an important research gap and provides a solid foundation for future studies in this area. Overall, it represents a commendable effort towards understanding the evolving landscape of educational technology in Malaysia.
