

Review of: "Sustainable entrepreneurial ecosystems in developing economies: A conceptualisation of complex adaptive systems approach"

Miguel Angoitia¹

¹ Universidad Autónoma de Madrid

Potential competing interests: No potential competing interests to declare.

The conceptual framework starts from the micro level and moves towards the meso and macro levels, elaborating a series of propositions in a reasoned and successful way.

The introduction perfectly describes the content of the rest of the article. I might considerer the agrobusiness as an exameple, rather than an major concern in the paper.

The literature review is thorough and combines a number of classic references as well as more recent contributions. In addition, the literature review rightly points out the existing gaps in relation to sustainable business ecosystems in developing countries, which is the focus of the author's contribution. Hence, the paper presents interesting reflections and synthesising concepts that help readers to understand the processes that drive entrepreneurial activity in sustainable business ecosystems within developing economies.
