paper under review [Haematological and Biochemical Patterns in the Liver Function of a Syrup Made From Vitex Doniana Fruit](#) is well drafted and will contribute to the scientific community. A few points for improvement.

1. [In vivo](#) trial showed only negative control results along with experimental groups. It will give a much clearer picture if the results of the positive control are added. It will also help to compare the effectiveness of the syrup prepared from [Vitex Doniana](#) fruit with drugs available in the market.
