# Arcitumomab

National Cancer Institute

## Source

National Cancer Institute. *Arcitumomab*. NCI Thesaurus. Code C1494.

A murine IgG monoclonal Fab' fragment antibody directed against carcinoembryonic antigen (CEA), a protein that is overexpressed by many tumor cell types. For tumors that overexpress CEA, technetium-99m labeled arcitumomab may be used as an adjunct diagnostic imaging tool to obtain prognostic information following resection and to monitor for recurrent disease. (NCI04)
