Review of Interactive e-Contents: A Novel Gamification Approach for Students' Satisfaction

It is a novel and interesting topic that warrants studying. It is clear that the authors have tried to elaborate on the subject and devoted a considerable amount of time to it. The following points serve to improve the article.

In the results section, it is written that the Pearson correlation test was used to examine the correlation between variables; however, no table is provided to illustrate the results.

In the conclusion section, one sentence is written as "To be placed," which is an incomplete one.

It is recommended that the authors add some new references to their work.
