The topic is very good and relevant to current issues.

The abstract is well-written and follows a proper flow. However, it would benefit from a brief clarification of the problem that motivated the author to investigate the effects of educational leadership. It is also suggested to specify the methods of data collection and analysis. The research objectives are clear and well-linked to the analyzed results. The research gap and conceptual model are addressed in the literature review. To enhance the quality of data analysis in future research, the author might consider using Smart PLS software to assess the direct relationship between independent and dependent variables, as well as the establishment of mediating or moderating variables.

Thank you.
