

Review of: "Teaching Patterns in Technological Curricula"

Anthony Anggrawan

Potential competing interests: No potential competing interests to declare.

(a) The abstract subsection generally contains the research background, research objective, research method, and research findings (explicitly stated). Please rearrange the abstract content of your manuscript according to the general format International articles generally contain keywords. Keywords are expressed after the Abstract. Please give Keywords in your manuscript.

(b) Generally, the main part of a scientific article consists of subsections/subtitles: Introduction, Related works (Literature review), research Method (or Methodology), Result, Discussion (or results and discussion), and conclusion. Please adjust your article writing by following the standard article structure. Or please follow the format of the article you are aiming for.

(c) The Introduction subsection should describe: * Research background (why the topic is important by referring to gaps in previous related research). Or gap analysis (what previous researchers have done and what needs to be done in this research); * Research purposes; * implications or benefits of research; * And at the end of the discussion in the Introduction subsection, the author must state the systematics of the subsequent manuscript.

(d) The Related works subsection reviews the latest related jobs. The authors need to point out that previous related work is different from the current research. So the authors point out that the article under study has a strength or novelty of research that has not been studied before).

(e) Note: Likewise, in the Methodology sub-section, Results and Discussion sub-section and Conclusion sub-section, there are essential matters that must be discussed. Please complete it.

(f) The number of references cited in your manuscript is too few. In reputable scientific articles, the number of references cited should be more than 10 articles from recent related work
