LCE3B wt Allele

National Cancer Institute

Source

National Cancer Institute. *LCE3B wt Allele*. NCI Thesaurus. Code C131198.

Human LCE3B wild-type allele is located in the vicinity of 1q21.3 and is approximately 1 kb in length. This allele, which encodes late cornified envelope protein 3B, plays a role in the keratinization of the epidermis. Variation of the gene may be associated with psoriatic arthritis.
