**Potential competing interests:** No potential competing interests to declare.

The paper gathers data on the 3/11 event and for this it seems interesting. However the presentation of data and methodologies used to process data need more details and work to make these data more useful.

In Fig 1 Measurement Units have to be shown on the axes.

Table 2 and Table 3 are not clear. Measurement units have to be clearly shown and more explanation of numbers are needed in the text.
