NUTM1 wt Allele

National Cancer Institute

Source

National Cancer Institute. *NUTM1 wt Allele*. NCI Thesaurus. Code C92706.

Human NUTM1 wild-type allele is located in the vicinity of 15q14 and is approximately 14 kb in length. This allele, which encodes NUT family member 1 protein, may play a role in the function of the testes. A chromosomal aberration t(15;19)(q13;p13.1) involving the gene and the human BRD4 gene is associated with a lethal midline thoracic, head and neck carcinoma.
