

# Review of: "Microsatellite Instability of Colon adenocarcinomas in India comprises multiple molecular subtypes"

Li-ren Li

Potential competing interests: No potential competing interests to declare.

1. Clusters in Figure 4b are not annotated
2. Figure 4C and 4B are missing in GEPIA Correlation analysis
3. The resolution of Figure 3B and Figure 3C needs to be improved
4. The authors only selected the three genes AXIN2, ETV4, and RNF43 by correlation instead of further screening genes by dimensionality reduction methods, and whether these three genes have clinical significance and how is their survival analysis
5. More importantly, there is no specific classification according to these three genes and verification the classification in the article. The summary is based on the assumptions of previous studies, and there is no mechanism-specific conclusion.
