Potential competing interests: No potential competing interests to declare.

The author has modelled the Aboveground Carbon of Oluwa Forest Reserve using LandSat 8 TM and Forest Inventory Data. However, the author has not mentioned any spectral indices in the abstract. This is crucial to demonstrate the effectiveness of indices in capturing carbon sequestration information.

Moreover, the introductory section is lacking in literature reviews. I urge the authors to kindly write down some past studies relevant to the study, where you can gather some originality and contribution of your study; without this, I found the study needs major revision.

The results and findings are relevant to the objectives of the research; however, they need to incorporate the above statement before publication.

Thanks.
