Potential competing interests: No potential competing interests to declare.

From the past, one of the controversial topics is the amount of recovery from oil and gas reservoirs. This article reviews the concepts and possible methods to increase it. The article has presented an interesting discussion, but it is very long and remains more like parts of a book. The quality of the figures is very low and, in some cases, words are used that are not applicable in the oil and gas industry. For example, "pool" is not correct, and the substitute is "reservoir."
