

Review of: "Crohn's Disease Presenting As Acute Abdomen: A Case Report"

David Sachar

Potential competing interests: The author(s) declared that no potential competing interests exist.

Reports of unusual presentations of Crohn's disease are generally welcome, but this report falls short on two counts. First, the presentation is not particularly unusual. Second, the diagnosis of Crohn's disease is not conclusively established, since the granulomas are not pathognomonic and Quantiferon test, AFB stains and cultures, and assays for other granulomatous conditions are not reported.
