Saxagliptin Hydrochloride

National Cancer Institute

Source

National Cancer Institute. *Saxagliptin Hydrochloride*. NCI Thesaurus. Code C81702.

The hydrochloride salt form of saxagliptin, an orally bioavailable, potent, selective and competitive, cyanopyrrolidine-based inhibitor of dipeptidyl peptidase 4 (DPP-4), with hypoglycemic activity. Saxagliptin is metabolized into an, although less potent, active mono-hydroxy metabolite.
