Insufficiency of the Article for Direct Publication: A Critical Review

Problem statement: The article under review lacks a clear problem statement that outlines the research gap and the significance of the study. The authors need to identify a specific research problem and describe why it is important to address this problem. Furthermore, the problem statement should include a concise research question and hypothesis that guide the study.

Literature review: The literature review of the article is inadequate and requires more relevant and recent references to support the research hypothesis. The authors need to conduct a comprehensive literature review to identify the most recent and relevant studies related to their research topic. This will help them to provide a more robust theoretical framework to support their research hypothesis.

Methodological flowchart: The article lacks a clear and detailed methodological flowchart, which makes it difficult for the readers to understand the study design, data collection, and analysis procedures. The authors should provide a well-structured and easy-to-follow methodological flowchart that includes all the essential steps in the research process.

Results: The discussion of results is not well-developed and requires more detailed analysis and interpretation. The authors need to provide a clear and concise summary of their findings and explain how they relate to the research hypothesis. Additionally, they should discuss the limitations of their study and suggest potential areas for future research.
