Potential competing interests: No potential competing interests to declare.

1. Useful topic, with impact on the improvement of didactic practices in the contemporary school.
2. It would be good for the abstract to contain essential data regarding the methodology of the research carried out.
3. The introduction would be better if it referred to the updated bibliography (the newest one is from 2018, before the pandemic!).
4. It would be useful to clearly specify the research problem, the hypothesis/hypotheses, some research objectives, as well as the main method/s used.
5. It would be necessary to specify the type of research, the bibliographic sources of the instruments, or the validation procedure (if developed by the authors), and the stages of the research.
6. The usefulness of the study would be increased if it were additionally specified in the conclusions what the research brings and what the obtained results can help with.
7. It is not very clear what the connection is between the research carried out and the model proposed by Perlman (2023).
