Review of: "Artificial Intelligence (AI), Extended Phenotypes, and the Bio-Evolutionary Anthropocene Hypothesis"

Angelo Romeo¹

1. Human Sciences Department, Marconi University, Rome, Italy

The article is well-researched and expertly addresses the topic of artificial intelligence. Both the analysis proposed at the beginning and the application field studied show good competence and capacity to analyse the literature on the topic of AI. As a suggestion, we could refer to some further examples that could deepen the proposed analysis, but the article is publishable for me.
