Potential competing interests: No potential competing interests to declare.

The research work conducted by the author is an excellent piece of work, according to my observation. I believe that the scientific community is waiting for this interesting result. However, several things need to be improved.

Introduction is too short and needs to be improved with recent citations.

Methodology: This part should be improved by providing information on the reference material used/standards used in XRF.

#Results and discussion: This part is alright; however, I did not find any information related to cluster analysis. I think PMF can give more information about sources rather than factor analysis.

However, this paper should be accepted after minor corrections.
