I've reviewed the manuscript and found it intriguing. Nevertheless, there is a crucial aspect missing from this study. Ahmad and colleagues (<https://onlinelibrary.wiley.com/doi/full/10.1002/rmv.2449>) recently conducted a comprehensive comparison of all published miRNA data related to SARS-CoV-2. They discovered that many potential COVID markers exhibited variability among studies and might not be suitable as proposed miRNA signatures. It is essential for the authors to validate their miRNA signatures accordingly.
