The subject of the review is interesting and scientifically important. The authors have explained the relationship between the Klotho protein and the GLU-1 antagonist very well. If this relationship is supported by clinical research, a significant step in treatment can be achieved.

I recommend that the descriptions of antineoplastic drugs could be shorter at the beginning of the review. It is better to use "semaglutide" instead of "Ozempic." "Ozempic" can be written in parentheses.
