Potential competing interests: No potential competing interests to declare.

The paper has been commendably researched and written. Nonetheless, certain inquiries need to be addressed before acceptance.

- Firstly, there is no documentation of a calibration report for the devices and instruments utilized in the study.
- Secondly, while the various types of tests and analyses are extensively explained, it would be beneficial to provide more detail that is universally accessible.
- Thirdly, the recorded peak bacteria population at Fadikpe is highlighted; however, the source of this heightened population is not addressed.
- Lastly, it is recommended to include expressions for calculations to enhance the clarity of the presented information.
