Potential competing interests: No potential competing interests to declare.

I commend the author for their excellent work in addressing the crucial topic of mental health among fishermen. The article is well-written and devoid of significant errors. However, it would be valuable to explore further the prevalence of suicidal behavior among fishermen, providing insight into this specific aspect of mental health within the fishing community. This addition could enhance the comprehensiveness of the article and contribute to a more nuanced understanding of the challenges faced by individuals in this profession.
