Potential competing interests: No potential competing interests to declare.

In this short article, which looks like an extended Abstract rather, the author expresses some personal opinions about the use of AI in e-learning without any documentation. There is a list of References at the end, but none of them is mentioned in the text. The core of the article discusses the use of ChatGPT in e-learning. It speaks for a case study about this matter conducted in a "university setting", but no description and statistical analysis of it is given. In conclusion, although the theme of the article is interesting, it needs much more work and documentation in order to become publishable.
