

# Review of: "Relationship between wettability of pulp fibers and tensile strength of paper during recycling"

Hayder Salem

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

Interesting experimental work. The first part, i.e. the contact angle test, good. I think the rest of the tests, the tensile strength test for example, was well documents for different types of treated fibres. However, I saw no harm to run those tests for the same samples used for the contact angle test.
