Familial cutaneous telangiectasia and oropharyngeal cancer predisposition syndrome

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Familial cutaneous telangiectasia and oropharyngeal cancer predisposition syndrome. ORPHA:313846*

Familial cutaneous telangiectasia and oropharyngeal cancer predisposition syndrome is a rare, inherited cancer-predisposing syndrome characterized by an early development of cutaneous telangiectasia, mild dental and nail anomalies, patchy alopecia over the affected skin areas and increased lifetime risk for oropharyngeal cancer. Other types of cancer have also been reported.
