This is a very interesting scientific article that focuses on the study of the heart from a religious, philosophical, and medical perspective. I believe it significantly contributes to the history of medicine and cardiology. Moreover, the historical references to progress in studying the heart's anatomy are accompanied by interesting visual material. I will only point out two things:

1. Regarding the mention of COVID and its impact on the heart, more bibliography related to our current knowledge of its effects on the heart should be provided.
2. Regarding the mention of Aristotle, I present an article that we have published with our team, which I believe can enrich the existing knowledge: <https://umbalk.org/heart-in-the-work-of-the-eminant-greek-philosopher-and-physician-aristotle-384-322-bc/> My opinion is that the article should be accepted for publication, perhaps with a bit more enrichment on the two points I noted.
