Potential competing interests: No potential competing interests to declare.

The title is very interesting, but there were some comments to improve the review.

- 1- The green synthesis using catalyst, the classification of catalysts will improve the idea.
- 2- The drawing style must be in unity form. Use one style of drawing.
- 4- The author does not cover the last ten years.
- 5- The yield must be discussed to clarify the benefits of using green catalysts.
- 6- The substituents in the schemes need revision. Please revise them well.
