Potential competing interests: No potential competing interests to declare.

The authors have attempted to evaluate the spatial interpolating methods using TRMM precipitation and ground-based precipitation datasets for the period 1998-2019 over Xinjiang. They also analyzed the precipitation patterns spatially and temporally. However, the authors are expected to address the following comments:

Major Comment:

The introduction section may still be elaborated by providing the status of the work at the national and international levels.

The titles of the axes of the graphs and interior elements should be in English.

Minor comment:

Section 3.3.1 - Check the spelling of "characteristics" in the title. It is given as "haracteristics".
