Dear Author,

Your work is very interesting. However, it must be improved. Please consider the following.

1. The abstract has to be more brief and to the point. A lot of information, which could be presented in the article body are included. I suggest to consider shorten it.
2. Many statements included in the introduction are not supported by relevant literature. I suggest to include the state of the art and background regarding the topic of your article and to rewrite the introduction with recent references for the information provided. This would enhance the scientific soundness of your work. Moreover, a systematic review method would help to make sure recent scientific developments are included.
3. The reference (Çevre ve Şehircilik Bakanlığı, 2012) is quite old. I suggest to try to detect and include more recent relevant works.
4. Generally the references are quite few for the scope of the paper.
5. The research method is not clearly presented. I suggest to include a material and methods paragraph.
6. A discussion of your suggestions and findings is missing. I suggest to include a chapter where to discuss the results and compare them with the literature.
7. Language improvement is needed. I suggest the author to review English language and style once again.
