Review of: "A Hollow Black Hole"

Ioannis Antoniou¹

1. Physics Department, University of Ioannina, Greece

The paper is well organized, and the analysis is clear. The topic of black holes is always hot. In the section "Introduction," the author says that the Hubble tension is readily explained by the information-theoretic e-dimensionality Cosmology. The Hubble tension is an open issue in Cosmology. The author should modify this sentence. Also, some recent citations could be added in order to reinforce the quality of this work.
