Potential competing interests: No potential competing interests to declare.

This study of competitive pressure on the willingness of Chinese undergraduates from non-branded universities to study abroad is of some reference significance, as follows:

1. Studying the willingness of undergraduates from non-branded universities to study abroad can provide a more comprehensive understanding of the motivations, expectations, and challenges faced by Chinese students studying abroad. This helps deepen the understanding of this social phenomenon and provides a basis for relevant policy making.
2. Focusing on the willingness of undergraduates from non-branded universities to study abroad is actually a concern about the fair distribution of educational resources. Through the study, we can understand the needs and dilemmas of this group of students and provide suggestions for the government and universities to improve and optimise educational resources, so as to promote educational equity.
3. It provides guidance for students' personal development. Through the study, it can help undergraduates from non-branded universities to have a clearer understanding of the advantages and disadvantages, prospects, and challenges of studying abroad, so that they can make decisions that are more in line with their own development.

Overall, the article is excellent in terms of content, research logic, and research solution.
