

Review of: "Thermal Remote Sensing: A tool to Determine Temporal Land Surface Temperature in Hawassa City, Ethiopia"

Ahmed Youssef

Potential competing interests: No potential competing interests to declare.

It is good to see this kind of studies about understanding the changes in the LST. the structure and presentation of the paper sections is good. Figures and tables are adequate. However, I found the following points: 1) English language needs to be improved. 2) There are repetition in some sentences in results and conclusion. 3) Figure 5 the temperature ranges are different between 2002 and 2019 and the author uses same color pattern which make some confusion.

Overall the paper could be improved with minor revision

Thank You
