# Split hand-split foot-deafness syndrome

INSERM

## Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Split hand-split foot-deafness syndrome. ORPHA:71271*

Split hand - split foot - deafness is an extremely rare genetic syndrome reported in a few families to date and characterized clinically by split hand/split foot malformation (SHFM; see this term) and mild to moderate sensorineural hearing loss, sometimes associated with cleft palate and intellectual deficit.
