Potential competing interests: No potential competing interests to declare.

The authors have elucidated the prolonged operational lifespan of electric vehicles, attributing it to a confluence of factors including technological advancements, infrastructural development, favorable policies, and evolving consumer preferences.

This comprehensive understanding of electric vehicles in different contexts, along with an examination of policies within distinct governance frameworks, holds significant relevance for researchers. Furthermore, the authors have adeptly condensed the key challenges associated with batteries and their sustainable use across a spectrum of hybrid electric vehicle models.
