Potential competing interests: No potential competing interests to declare.

I had the opportunity to review your article, and I must say that it contains valuable content and addresses an important topic within the academic community of emergency medicine. However, there are a few areas that could benefit from improvement to enhance the overall quality of the paper.

Clarity in Methodology and Purpose: It is essential to provide greater clarity regarding the methodology employed in your research and the specific purpose of the study. Clearly defining the research scope and aligning the objectives with the results will help prevent any confusion for the readers.

Ethical Considerations: Explicitly mentioning ethical considerations is crucial in academic research. Whether your research involved human subjects, data collection, or any other ethical concerns, it is important to address these in your article. This ensures transparency and compliance with ethical standards.

Limitations and Biases: Identifying and discussing the limitations or potential biases in your research is an essential aspect of scholarly writing. Acknowledging these aspects not only demonstrates a comprehensive understanding of your study but also helps readers assess the validity and generalizability of your findings.

Despite these areas for improvement, your article is undoubtedly a significant contribution to the field of emergency medicine. By addressing these concerns and making the necessary revisions, your work has the potential to be even more impactful and valuable to the academic community.
