# Caspofungin

National Cancer Institute

## Source

National Cancer Institute. *Caspofungin*. NCI Thesaurus. Code C28910.

An antimycotic echinocandin lipopeptide, semisynthetically derived from a fermentation product of the fungus *Glarea lozoyensis*. Caspofungin inhibits 1,3-beta-glucan synthase, resulting in decreased synthesis of beta(1,3)-D-glucan (an essential component of the fungal cell wall), weakening of the fungal cell wall, and fungal cell wall rupture. This agent is active against *Aspergillus* and *Candida* species.
