Renal Cell Carcinoma with t(6;11);(p21;q12); MALAT1-TFEB

National Cancer Institute

Source

National Cancer Institute. *Renal Cell Carcinoma with t(6;11);(p21;q12); MALAT1-TFEB*.
NCI Thesaurus. Code C37210.

An extremely rare renal cell carcinoma affecting young patients. It is characterized by the presence of the specific chromosomal translocation t(6;11);(p21;q12) which fuses the MALAT1 gene with the TFEB transcription factor gene.
