Potential competing interests: No potential competing interests to declare.

Thank you for your innovative work which investigated a vital topic combining a number of domains related to technology, health, environment and users' behavior.

In order to improve your valuable paper, let me highlight some points:

Methodology:

- The approach used to reach the participants and the inclusion/exclusion criteria should be elaborated clearly.
- Clarify the link between the framework and the used questionnaire.
- Questionnaire source/reference and the steps for reliability and validation check are missing. Nothing is mentioned about the language used and whether it has been translated or not.

Data analysis and discussion:

- The results were repeated in details although they were well presented in the tables.
- Using some statistical analytical tests can add to your work.
- The discussion is minimal without referring nor integrating with other studies.

Conclusion:

- Needs to be more concise.
