Potential competing interests: No potential competing interests to declare.

From the abstract you should clarify what your methodology is, it is not clear. It is inferred that it is a qualitative approach, but the perspective is not clear. In the same way, it is not necessary and even difficult to test hypotheses in a qualitative research, so I suggest rephrasing that part more towards what are the research assumptions.

You need to explain in a better way how you selected your sample and the ethical procedures you followed, even though at the end of the article you mention that you received ethical approval. A discussion section before the conclusions would also be desirable.
