Actual Quality

\textbf{Qeios} is the first tool designed to improve the quality of the research by acting at the production level. A new piece of knowledge, the \textbf{Definition}, and the review system built on it allow researchers to produce and publish \textbf{Articles} of increased quality and comparability.
Democracy & Meritocracy
Researchers on Qeios are valued by the community on what they publish. This is the maximum expression of democracy and meritocracy, and a far more valuable form of quality check.

Open Access
Qeios can be read 100% free by anyone. There are no economic and technological barriers between knowledge and people with Internet access.

Visibility
On Qeios visibility is enormously increased thanks to:
- A new object, the Definition, with the name of the researchers on it. Definitions, by their very nature, move much faster than articles amongst researchers. In addition, researchers’ names can be caught by common readers looking for a new, powerful encyclopaedia — Qeios.
- Features such as following, commenting, rating, tagging and activity recording.

Publishing Time
No waiting time to publish research. Articles and Definitions will be publicly available as soon as they are ready.

Networking
Qeios helps researchers connect with colleagues and Academic Institutions / Research Funders looking for qualified and talented scientists for their organisations.
