

# Review of: "Optimized Low-Powered Wide Area Network within Internet of Things"

Aruna Pathak

**Potential competing interests:** No potential competing interests to declare.

This paper focuses on three different strategies: LoRa power consumption model design, simulation of IoT wireless sensor networks, and implementation of SF allocation across the wireless sensor network.

Consider adding a paragraph in introduction section that outlines the structure of the rest of the paper. This will help the reader to understand what to expect in the following sections.

You've provided a brief overview of literature survey. However, it would be beneficial to provide more details about unique features of your work would make its significance clearer to the reader.

The authors could consider including a section on potential future work or improvements to the proposed work.
