This article needs minor revision before publication.

- The author should clearly explain the significance and reasoning behind this study.
- To improve the credibility of the findings, it is recommended to include a section addressing the study's limitations, including biases and survey design issues.
- It would be helpful to briefly compare COVID-19 status among KPK medical students with similar studies conducted in other regions or countries. This will contribute to a more comprehensive understanding of COVID-19's global impact on medical and Applied medical sciences students. Compare your results with this study result to enrich the discussion. <https://pubmed.ncbi.nlm.nih.gov/37305167/>
- The conclusions section should definitely address the crucial implications of the findings on medical education and healthcare systems. Moreover, the practical recommendations derived from the results have the potential to shape future strategies for curbing the spread of COVID-19 among medical students.
