Potential competing interests: No potential competing interests to declare.

- (1) Literature review must be summarized. What is the novelty of the manuscript? Applied aspects as well.
- (2) How to formulate the experimental diets? What was the basis of replacement? Weight-based or protein-based?
- (3) Because of the numerical origin of treatments, regression analysis must be done rather than mean comparison.
- (4) The index of protein productive value (PPV) must be measured.
- (5) Why was the voluntary feed intake (VFI) of test fish not measured?
